2015-16	Knowledge Management	Cloud Coder	Cloud coder is a web-based programming exercise system designed for introductory programming courses. Using Cloud Coder, instructors can assign practice problems to reinforce concepts and assess mastery of skills. Students access their assigned problems using a web browser. A typical problem asks the student to write a function or complete program to perform a simple task such as classifying input or performing a computation on input data. When the student submits her solution to a problem, the server tests her code against a series of test cases designed by the instructor and reports which tests executed correctly. Cloud Coder is inspired by existing systems such as Coding bat, but is designed to be installed and used widely. As such, Cloud Coder is open source https://github.com/daveho/CloudCoder and supports programming exercises in multiple languages currently C, Java, and Python.	300000.00	0.00	2000
2017-18	Clean, Green and Smart Campus	Smart Controller for Air conditioner	The electric controller of Air conditioner is replaced with the system based smart device where ever there are centralised air conditioners. The entire air conditioner unit in the campus is controlled by single device. This device is an improved version of Smart Electric controller for Air conditioner. The history about the usage of Air conditioner is automatically stored in the server. The entire on or off operation for the AC is controlled by the server based on the instruction already coded inside. The analysis of usage Air conditioner is made with this model. This analysis provides various types of feedback to improve the operations inside the campus. This product also we are using effectively.	260000.00	2064000.00	2
