**Pre-requisites:**

- Basic Knowledge of Database, Source code, Text Editor, Basic Programming Concepts.

**Course Description:**

- This course introduces the student to object-oriented programming through a study of the concepts of program specification and design, algorithm development, and coding and testing using a modern software development environment
- Students learn how to write programs in an object-oriented high level programming language. Topics covered include fundamentals of algorithms, flowcharts, problem solving, programming concepts, classes and methods, control structures, arrays, and strings.
- Problem solving skills will be stressed and applied to solving computing problems. Weekly laboratory experiments will provide hands-on experience in topics covered in this course.

**Course Objectives:**

- C++ is a programming language with a special focus on the concepts of OOPs and their implementation. It has object-oriented features, which allow the programmer to create objects within the
- The course helps acquire a fundamental understanding of the OOPs concepts, input/output data management, arrays in C++, functions, classes, objects, pointers, and much more.
- The course has been designed with a uniform structured series of modules enumerating various pertinent concepts.

**Expected Outcome:**

- Enhance the knowledge and understanding of Database analysis and design.
- Enhance the knowledge of the processes of Database Development and Administration using C++
- Enhance Programming and Software Engineering skills and techniques using C++ .Preparation of background materials and documentation needed for Technical.

<b>Pre-Requisite</b>	Basic Knowledge in Electronics
<b>Course Description</b>	Students interested in taking courses in basic electronics may enroll in a degree or certificate program in electronics technology. The study of basic electronics technology teaches students how to diagnose, repair, design and create electronics components. The emphasis is first on understanding the characteristics of basic circuits including resistors, capacitors, diodes, and bipolar and field effect transistors. This course is an integration of various topics like circuit theory, Digital and linear electronics, Microprocessors and controllers and communication systems.
<b>Course Objective</b>	To understand what is electricity and how it is used in various applications. To understand the construction and working of active and passive components. To construct more complex circuits such as rectifier circuits and power supplies. To study the working principles of the semiconductor devices and its applications. To identify the difference between digital and linear electronics.
<b>Course Outcome</b>	To analyze and interpret electrical and electronic diagrams. To evaluate the Electronics System parameters and variables with the electronics instruments. To develop your own application using electronic components. To design a real time application with microcontrollers and processors. To understand the methodology of the communication taking place between two devices.

## Syllabus - Art of Electronics

**Academic Year : 2017-18**

**Title of the Add-on : Art of Electronics**

**Sem : ODD**

**Course code : ECS18AoE**

**Duration : 40 hours**

**Start Date : 19/06/2017**

**End Date : 23/06/2017**

**Pre-requisites :**

- Basics in electronics, circuits

**Course Description :**

- This course will introduce graduate students to the principles and programming environments used with Processing and Arduino.
- Arduino is a tool for making computers that can sense and control more of the physical world than your desktop computer. It's an open-source physical computing platform based on a simple microcontroller board, and a development environment for writing software for the board.
- Students will be introduced to the relevant technologies, histories, and materials of integrated digital art making.
- Students will create several projects over the semester, and develop a context for their work via lectures, presentations, and critiques.

**Course Objectives:**

- To train the students to startup with Arduino board and its IDE installation.
- To make them familiar with ADMEGA controllers this is used in Arduino.
- To provide required skill and knowledge needed for engineering students to do Arduino based projects.
- Equip electronics say students and hobbyists to convert their enthusiasm and talent into developing various projects such as robot design

**Expected Outcome :**

- Understand the basic principle of how to communicate with the Arduino.
- Understand the conditions for Arduino & Processing.
- Design and develop their own projects using various sensors.
- Use microcontrollers with practical applications.
- To develop programs on Arduino and to create own projects.
