Syllabus - C++ Programming

Academic Year : 2019-2020
Title of the Add-on : C++ using CloudCoder

Sem: ODD

Course Code : 31CS412

Duration : 30 Hours

Start Date : 01/08/2019

End Date : 31/08/2019

Pre-requisites :

- C Programming, Object Oriented Programming

Course Description :

This course focuses on 'how' as opposed to 'what'. For example, in the lesson on functions, we do not teach what a function is, but rather how to create a function in C++.

The lessons are taught by several different instructors who have used C++ in their professional careers, so students get to experience different perspectives.

Course Objectives:

The objectives of the course are to have students identify and practice the object-oriented programming concepts and techniques, practice the use of C++ classes and class libraries, arrays, vectors, inheritance and file I/O stream concepts.

Expected Outcome :

Acquire the skills for writing a program in different C++ Integrated Development Environments.

Implement polymorphic features of object-oriented programming in creating and extending abstract data types.

Dissect real-world problems using reusable classes with inheritance, exception handling and file handling, etc. Create efficient programs using generic and STL programming for generating optimized code.

Work in teams to develop projects for real-life cases using object-oriented features.

Actual Outcome :(After completing the Add-on)

- Upon successful completion of this Lab the student will be able to develop applications for a range of problems using object-oriented programming techniques.
- Code and use Software Tools to solve problems and present their optimal solutions.

Assessment Procedure :

- At the end of the semester , assessment is conducted.

Value Added Course

Name of the Course	Arduino with Sensors and Drives
Course Code	17ECSADUSD
Duration	40 hrs
Start Date	01/08/2019
End Date	31/08/2019
Pre-Requisite	Basic Knowledge in Electronics
Course Description	This course will introduce graduate students to the principles and programming environments used with Processing and arduino. Arduino is a tool for making computers that can sense and control more of the physical world than your desktop computer. It's an open-source physical computing platform based on a simple microcontroller board, and a development environment for writing software for the board. Students will be introduced to the relevant technologies, histories, and materials of integrated digital art making. Students will create several projects over the semester, and develop a context for their work via lectures, presentations, and critiques.
Course Objective	To train the students to start-up with arduino board and its IDE installation. To make them familiar with ADMEGA controllers this is used in arduino. To provide required skill and knowledge needed for engineering students to do arduino based projects.
Course Outcome	To understand the basic principle of how to communicate with the arduino. To understand the conditions for arduino & processing. To design and develop own projects using various sensors. To use microcontrollers with practical applications. To develop programs on arduino and to create own projects.
